The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected on the 35 USC 102 (b) as being anticipated by Japan (962), or Japan (248). The abstract as well as figures 3 and 4, of Japan (962) teaches the structure and operation of a piezoelectric transducer transformer which supplies an output voltage (boosting an alternative voltage applied) and output terminal which is higher than the voltage across the input terminals. An error is detected, compared with a threshold value, and subsequently used to intermittently stop operation of the circuit. When operation is resumed, the frequency of the drive voltage is gradually reduced from a point above the normal driving range until stabilization is achieved. In a similar manner, the abstract and figure 1 of Japan (48) teaches the above described circuit and operation.

Claims 2 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
